Please find below and/or attached an Office communication concerning this application or proceeding.

		Application I	No.	Applicant(s)				
	Office A. 4' Occurrence	09/470,875		KHAIRA ET AL.				
	Office Action Summary	Examiner		Art Unit				
		Dwin M Craig		2123				
The MAILING DATE of this communication appears on the cover sheet with the correspondence address Period for Reply								
A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION. - Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication. - If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely. - If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication. - Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). - Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b). Status								
1)⊠	Responsive to communication(s) filed on 12 N	Vovember 200	4					
2a)⊠		is action is no	_					
3)	Since this application is in condition for allowance except for formal matters, prosecution as to the merits is							
closed in accordance with the practice under Ex parte Quayle, 1935 C.D. 11, 453 O.G. 213.								
Disposition of Claims 4)⊠ Claim(s) 1-5 and 7-56 is/are pending in the application.								
	4a) Of the above claim(s) <u>8</u> is/are withdrawn from consideration. 5) Claim(s) is/are allowed.							
	6) Claim(s) 1-5, 7 and 9-51 is/are rejected.							
7) Claim(s) is/are objected to.								
8) Claim(s) are subject to restriction and/or election requirement. Application Papers								
9) The specification is objected to by the Examiner.								
10)☐ The drawing(s) filed on is/are: a)☐ accepted or b)☐ objected to by the Examiner.								
Applicant may not request that any objection to the drawing(s) be held in abeyance. See 37 CFR 1.85(a).								
11) The proposed drawing correction filed on is: a) approved b) disapproved by the Examiner.								
If approved, corrected drawings are required in reply to this Office action.								
12)☐ The oath or declaration is objected to by the Examiner.								
Priority under 35 U.S.C. §§ 119 and 120								
13) Acknowledgment is made of a claim for foreign priority under 35 U.S.C. § 119(a)-(d) or (f).								
a) ☐ All b) ☐ Some * c) ☐ None of:								
	1. Certified copies of the priority documents have been received.							
	2. Certified copies of the priority documents have been received in Application No							
Copies of the certified copies of the priority documents have been received in this National Stage application from the International Bureau (PCT Rule 17.2(a)). * See the attached detailed Office action for a list of the certified copies not received.								
14) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. § 119(e) (to a provisional application).								
a) The translation of the foreign language provisional application has been received:								
15) Acknowledgment is made of a claim for domestic priority under 35 U.S.C. §§ 120 and/or 121.								
Attachment(s)								
2) Notice	e of References Cited (PTO-892) e of Draftsperson's Patent Drawing Review (PTO-948) nation Disclosure Statement(s) (PTO-1449) Paper No(s)	4) 5) 6)	Notice of Informal P	(PTO-413) Paper No(s) atent Application (PTO-152)				

DETAILED ACTION

1. Claims 1-5 and 7-55 have been presented for reconsideration. Claim 8 has been cancelled as per Applicant's request.

Response to Arguments

- 2. Applicant's arguments filed on 11-2-2004 have been fully considered. Examiners response is as follows:
- 2.1 Regarding Applicant's response to the 35 U.S.C. 103 rejections of Claims 1, 2, 4, 5, 8-10, 21, 22, 24-27, 29, 30, 31, 32, 34-43, 45, 46 and 48-55:

Applicant argued (see page 17 of the 11/2/2004 response),

Applicants respectfully submit that none of the cited sections of Eisenhofer teach, suggest of disclose "...operating each interface to convert the messages between a data format with the fixed configuration backplane and a data format associated with the simulator associated with the interface" as specifically recited in independent claim1.

The Examiner respectfully traverses Applicant's arguments. The Examiner respectfully points to Figure 2 of Eisenhofer(494) which discloses a plurality of simulation modules items 231,232, 233 and 234 and simulation interfaces items 241, 242, 243 and 244. The Eisenhofer(494) reference goes on to discloses in Col. 12 lines 40-41 that the simulation backplane performs data type conversion. The Examiner has not found the Applicants arguments to be persuasive for the reason cited. The Examiner upholds the earlier 35 U.S.C. 103 rejections of the claims.

Application/Control Number: 09/470,875 Page 3

Art Unit: 2123

Claim Rejections - 35 USC § 103

The Examiner has followed the factual inquiries set forth in *Graham* v. *John Deere Co.*, 383 U.S. 1, 148 USPQ 459 (1966), that are applied for establishing a background for determining obviousness under 35 U.S.C. 103(a) are summarized as follows:

- 1. Determining the scope and contents of the prior art.
- 2. Ascertaining the differences between the prior art and the claims at issue.
- 3. Resolving the level of ordinary skill in the pertinent art.
- 4. Considering objective evidence present in the application indicating obviousness or nonobviousness.

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

- (a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negatived by the manner in which the invention was made.
- 3. Claims 1, 2, 4, 5, 7-10, 13-18, 21, 22, 24-27, 29, 30, 31, 32, 34-43, 45, 46, 48-51, and 53-56 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eisenhofer et al. U.S. Patent 6,108,494 hereafter referred to as the Eisenhofer-1 reference in view of Worthington et al. U.S. Patent 5,881,270 and in further view of Eisenhofer et al. U.S. Patent 6,339,836 hereafter referred to as the Eisenhofer-2 reference.
- 3.1 As regards independent Claims 1, 21, 26, 29, 34 and 51 the Eisenhofer-1 reference discloses a method for distributed simulation (Col. 7 Lines 15-25), at least two simulators (Figure 2), a back plane (Figure 2 Item 210), an interface for the simulators (Col. 5 Lines 52-67, Col. 6 Lines 1-20), fixed configuration back plane (Col. 5 Lines 5-7), exchanging

messages (Col. 8 Lines 42-47) and data format conversions (Col. 5 Lines 52-67, Col. 6 Lines 1-20, Col. 12 Lines 34-67, Col. 13 Lines 1-5).

The *Eisenhofer-1* reference does not expressly disclose simulators that represent components of a system based on a processor and a chipset.

The Worthington et al. reference discloses a method for flexible simulation modeling that represent at least one of a component and a system based on processors and chipsets (Figures 1, 3, 3A, 4, Col. 4 Lines 47-61).

It would have been obvious, to one of ordinary skill in the art, at the time the invention was made, to have modified the *Eisenhofer-1* reference with the *Worthington et al.* reference because by providing entire multi-chip system models using individual system component models, an entire set of integrated circuits may be tested and simulated, not just individually, but in a manner that simulates how they will interact with each other such that problems in how the different chips interact can be detected before costly fabrication occurs (*Worthington et al. Col. 1 Lines 45-51*).

- 3.2 As regards the limitation of an apparatus in independent Claims 40 and 45 the Eisenhofer-1 reference discloses an apparatus (Figure 3, Col. 6 Lines 46-67, Col. 7 Lines 1-25).
- 3.3 As regards independent Claims 53-55 the *Eisenhofer-1* reference discloses an articled with a storage medium wherein there is stored instructions for a processor (Figure 3, Col. 6 Lines 46-67, Col. 7 Lines 1-25).
- 3.4 As regards the limitation of validating a component/ element of a design in independent Claims 29, 34, 40 and 45 the *Eisenhofer-1* reference does not expressly disclose validation.

Art Unit: 2123

The Worthington et al. reference discloses validation (Col. 8 Lines 30-40).

It would have been obvious, to one of ordinary skill in the art, at the time the invention was made, to have modified the *Eisenhofer-1* reference with the *Worthington et al.* reference because by providing entire multi-chip system models using individual system component models, an entire set of integrated circuits may be tested and simulated, not just individually, but in a manner that simulates how they will interact with each other such that problems in how the different chips interact can be detected before costly fabrication occurs (*Worthington et al. Col. 1 Lines 45-51*).

3.5 As regards Claims 2, 22, 31, 38, 42 and 49 the Eisenhofer-1 reference does not expressly disclose a driver.

The Worthington et al. reference discloses a driver (Figure 1 Item 14b).

It would have been obvious, to one of ordinary skill in the art, at the time the invention was made, to have modified the *Eisenhofer-1* reference with the *Worthington et al.* reference because by providing entire multi-chip system models using individual system component models, an entire set of integrated circuits may be tested and simulated, not just individually, but in a manner that simulates how they will interact with each other such that problems in how the different chips interact can be detected before costly fabrication occurs (*Worthington et al. Col. 1 Lines 45-51*).

3.6 As regards Claims 4, 24, 32, 39, 43, 50, the *Eisenhofer-1* reference does not expressly disclose generating specific circuit models, however the reference does discuss the use of models in circuit simulation.

Art Unit: 2123

The Worthington et al. reference discloses models of components used in circuit simulation (Figures 1-10, Col. 2 Lines 30-67, Col. 3 Lines 1-8).

It would have been obvious, to one of ordinary skill in the art, at the time the invention was made, to have modified the *Eisenhofer-1* reference with the *Worthington et al.* reference because by providing entire multi-chip system models using individual system component models, an entire set of integrated circuits may be tested and simulated, not just individually, but in a manner that simulates how they will interact with each other such that problems in how the different chips interact can be detected before costly fabrication occurs (*Worthington et al. Col. 1 Lines 45-51*).

- 3.7 As regards Claims 5, 25, 27, 30, 35, 41 and 46 the Eisenhofer-1 reference discloses an integrated circuit (Col. 1 Lines 30-48).
- 3.8 As regards Claims 8, 9 and 56 the *Eisenhofer-1* reference discloses a global signal used for synchronization and simulators being relaxed based on the current state of that simulator (Col. 6 Lines 21-45).
- 3.9 As regards Claim 10 the *Eisenhofer-1* reference discloses synchronizing different types of simulators (Col. 11 Lines 60-67, Col. 12 Lines 1-25).
- 3.10 As regards Claims 13 and 15 the *Eisenhofer-1* reference discloses exchanging messages to enable simulators using different encoding schemes (Col. 5 Lines 52-67, Col. 6 Lines 1-20, Col. 12 Lines 34-67, Col. 13 Lines 1-5).
- 3.11 As regards Claims 14, 16 and 17 the *Eisenhofer-1* reference discloses resolving conflicts based on boundary conditions between different simulators (Figure 7, Col. 5 Lines 19-25, Col. 6 Lines 21-45, Col. 12 Lines 7-40).

Application/Control Number: 09/470,875

Art Unit: 2123

3.12 As regards Claim 18 the Eisenhofer-1 reference discloses high-level languages (Col. 7 Lines 27-51).

Page 7

3.13 As regards Claims 37 and 48 the Eisenhofer-1 reference does not expressly discloses a message from a second device.

The Worthington et al. reference discloses getting a test message from a second device (Figures 3, 4, 8, Col. 2 Lines 30-44).

It would have been obvious, to one of ordinary skill in the art, at the time the invention was made, to have modified the *Eisenhofer-1* reference with the *Worthington et al.* reference because by providing entire multi-chip system models using individual system component models, an entire set of integrated circuits may be tested and simulated, not just individually, but in a manner that simulates how they will interact with each other such that problems in how the different chips interact can be detected before costly fabrication occurs (*Worthington et al. Col. 1 Lines 45-51*).

- 4. Claims 3, 7, 20, 23, 28, 33, 36, 44, 47, are rejected under 35 U.S.C. 103(a) as being unpatentable over Eisenhofer et al. U.S. Patent 6,108,494 hereafter referred to as the Eisenhofer-1 reference in view of Worthington et al. U.S. Patent 5,881,270 and in further view of Eisenhofer et al. U.S. Patent 6,339,836 hereafter referred to as the Eisenhofer-2 reference and in further view of Ly et al. U.S. Patent 6,175,946.
- 4.1 As regards independent Claims 1, 21, 26, 29, and 34 see the rejection in paragraph 3.1.
 - 4.2 As regards independent Claims 40 and 45 see the rejection in paragraph 3.2.

Application/Control Number: 09/470,875

4.3 As regards Claims 3, 20, 23, 28, 33, 36, 44, 47 the Eisenhofer-1 reference does not expressly disclose a checker.

The Ly et al. reference discloses a checker (Figure 1A, 5, 6, Col. 2 Lines 36-42).

It would have been obvious to one of ordinary skill in the art, at the time of the invention was made, to have modified the *Eisenhofer-1* reference with the *Ly et al.* reference because diagnosing errors flagged by automatically generated checkers is much easier than diagnosing errors flagged by end-to-end tests, (*Ly et al. Col. 3 Lines 53-56*).

4.4 As regards Claim 7 the *Eisenhofer-1* reference does not expressly disclose a tree. The *Ly et al.* reference discloses a process control tree (Figure 3A).

It would have been obvious to one of ordinary skill in the art, at the time of the invention was made, to have modified the *Eisenhofer-1* reference with the *Ly et al.* reference because diagnosing errors flagged by automatically generated checkers is much easier than diagnosing errors flagged by end-to-end tests, (*Ly et al. Col. 3 Lines 53-56*).

- 5. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eisenhofer et al. U.S. Patent 6,108,494 hereafter referred to as the Eisenhofer-1 reference in view of Worthington et al. U.S. Patent 5,881,270 and in further view of Eisenhofer et al. U.S. Patent 6,339,836 hereafter referred to as the Eisenhofer-2 reference and in further view of Dearth et al. U.S. Patent 5,881,267.
 - 5.1 As regards independent Claim 1 see the rejection in paragraph 3.1.
- 5.2 As regards Claims 11 and 12 the Eisenhofer-1 reference does not expressly disclose executing a remote procedure call.

The Dearth et al. reference discloses executing a remote procedure call (Col. 10 Lines 45-56).

Page 9

It would have been obvious, at the time of the invention was made, to one of ordinary skill in the art to have modified the Eisenhofer-1 reference with the Dearth et al. reference because the Dearth et al. reference discloses a method of improving the accuracy of a distributed simulation (Dearth et al. Col. 3 Lines 30-35).

- 6. Claim 19 is rejected under 35 U.S.C. 103(a) as being unpatentable over Eisenhofer et al. **U.S. Patent 6,108,494** hereafter referred to as the *Eisenhofer-1* reference in view of Worthington et al. U.S. Patent 5,881,270 and in further view of Eisenhofer et al. U.S. Patent 6,339,836 hereafter referred to as the Eisenhofer-2 reference and in further view of Dearth et al. U.S. Patent 5,732,247.
 - 6.1 As regards independent Claim 1 see the rejection in paragraph 3.1 above.
- 6.2 As regards Claim 19 the Eisenhofer-1 reference does not expressly disclose handwritten test for all simulators.
- The Dearth et al. reference discloses test written in a high-level language (Figure 6.3 1).

It would have been obvious to one of ordinary skill in the art, at the time of the invention was made to have modified the Eisenhofer-1 reference with the Dearth et al. reference because the Dearth et al. reference discloses an improved method to write test routines for hardware simulation (Dearth et al. Col. 2 Lines 14-20).

- 7. Claims 11 and 12 are rejected under 35 U.S.C. 103(a) as being unpatentable over Eisenhofer et al. U.S. Patent 6,108,494 hereafter referred to as the Eisenhofer-1 reference in view of Worthington et al. U.S. Patent 5,881,270 and in further view of Eisenhofer et al. U.S. Patent 6,339,836 hereafter referred to as the Eisenhofer-2 reference and in further view of Dearth et al. U.S. Patent 5,732,247.
 - 7.1 As regards independent Claim 1 see the rejection in paragraph 3.1.
- 7.2 As regards Claims 11 and 12 the Eisenhofer-1 reference does not expressly disclose executing a remote procedure call.

The *Dearth et al.* reference discloses executing a remote procedure call that is deadlock safe (Figures 4, 4A, 4B, 4C, 4D).

It would have been obvious to one of ordinary skill in the art, at the time of the invention was made to have modified the *Eisenhofer-1* reference with the *Dearth et al.* reference because the *Dearth et al.* reference discloses an improved method to write test routines for hardware simulation (*Dearth et al. Col. 2 Lines 14-20*).

Conclusion

- 8. Claims 1-5 and 7-56 have been presented for reconsideration. The Claims have been reconsidered and rejected.
- **8.1 THIS ACTION IS MADE FINAL.** Applicant is reminded of the extension of time policy as set forth in 37 CFR 1.136(a).

A shortened statutory period for reply to this final action is set to expire THREE MONTHS from the mailing date of this action. In the event a first reply is filed within TWO

MONTHS of the mailing date of this final action and the advisory action is not mailed until after the end of the THREE-MONTH shortened statutory period, then the shortened statutory period will expire on the date the advisory action is mailed, and any extension fee pursuant to 37 CFR 1.136(a) will be calculated from the mailing date of the advisory action. In no event, however, will the statutory period for reply expire later than SIX MONTHS from the mailing date of this final action.
